WIRELESS RIG SYSTEM WITH VOIP SERVICES

High quality wireless voice connection with customized unlimited wireless extensions

The RigNet Wireless Intercom System is a customizable solution which allows for stand-alone wireless communication in remote, harsh environments, such as offshore or land drilling locations. Our systems allow both private conversation through built-in or external phones as well as a public address (PA) option using external PA speakers.

We custom build our intercom systems in house allowing our systems to be more affordable than traditional intercom systems.

How it Works

Each phone station has its own three digit extension. The RigNet Phone Stations communicate to other stations using Wi-Fi technology. Receive and place telephone calls or use the intercom system to page someone.

We can customize a solution to fit your company's specific needs.

Features of the RCOT

- High Quality Wireless Voice Connection to each extension
- Safety compliant Class 1, Div 2 (or class 1, Div 1 in specific areas)
- Cordless and Corded desk phones for each shack extension are provided
- Flexible system allows unlimited wireless extensions
- No wires crossing the drill site or between well site trailers
